1) Stepcounter app:

This application counts the number of steps, it works by sensing our device or by shaking during we walk,here the application will have two buttons one to start the app which will start counting the number of steps and once its done u can stop by clicking the stop butoon as follows.

The steps will be counted until the stop count button will be clicked.

Part-2 : Face Detection

Here the app will detect the facial features as eyes, smile,left and right open eye, here we can use Face API to detect a face

The eye classification will be having both left any right eye

The result will be as follows:
